Counterpoint Engineering*

CONTRACT TYPE:

Firm Price

DURATION OF PROJECT:

6 Months

PROJECT SIZE:

115,000 sq. ft.

The Port Elgin Walmart Store was one of three Walmart Superstores built by Prime Design during 2008. This project was a green field site. Prime was responsible for the building and sitework on this project.

The professionalism and efficiency of the design, development and construction teams made for a very productive working environment on this project. The quality of work is some of the best we have seen when compared to similar projects. The main slab on grade was a polished grey finish that was handed over with a brilliant bright shine that still shows off today.

The project was constructed and turned over on time with no hitches while maintaining or exceeding required safety and quality standards.
